Drought

02/28/11 23:59 CST

0.11M

Drought conditions improved during the early part of February due to precipitation from three winter storms, but then conditions deteriorated near the end of the month from lack of significant rainfall. During the latter half of the month, severe to extreme drought conditions began expanding. Drought conditions were the worse over the eastern and southeastern counties of north Texas during the month. Extreme drought (D3) as defined by the US Drought Monitor persisted across the southeast for much of the month. Twenty-five counties had Burn Bans during the month.

The first week of February 2011 was plagued with two winter weather events and persistent cold temperatures. The first winter storm began late on January 31st and ended during the morning hours of February 1st. A strong cold front blew through the region ushering in very cold air ahead of an approaching upper level system. Before the snow began, periods of rain, freezing rain, and sleet provided a sheet of ice underneath the snow. At times, thundersleet was observed. The highest snowfall totals fell across the northwestern counties of the CWA where 5-8" of snow was reported. Elsewhere, up to 3/4" of ice and 2" of sleet were reported in some counties. The combination of winter precipitation types resulted in hazardous conditions across much of the region. To make things worse, the cold air stayed in place for the next 3-4 days and another winter storm affected the region a few days later on the 3rd-4th. Schools and businesses were shut down for days and rolling blackouts were needed on the 2nd to account for the extreme demand on the state's electricity grids. The winter storm also affected airports across north Texas, and the economic toll from the winter storms and cold air was large due to the fact that this was the week leading up to Superbowl 45 in Arlington. In Erath County, one man died from exposure to the cold temperatures on the 1st.

Slick roadways are believed to be the cause of a fatal accident on FM 1753. A man riding a motorcycle lost control on the wet road and slid off the road. He died while en route to the hospital.

A strong upper level disturbance combined with an advancing dryline/front to produce a line of storms across north Texas during the evening hours. Only a few reports of hail up to quarter size were reported with these storms. Wet roads resulted in a fatal, one vehicle accident in Grayson County.
